# Mechanical ferris wheel

Hi there! I'm Mr Sparkz Let me introduce You to my huge friend Mansion manor

Hey there, little creator!

I'm Mansion manor, the mehanical ferris wheel.

Hello there, young explorer! I am the Mansion Manor Wooden Mechanical Ferris Wheel, and I'm here to take you on an exciting adventure.

I'm not just an ordinary Ferris wheel; I'm a special one made of wood and gears! You see, a Ferris wheel is a big round structure with small rooms hanging on it like cabins. People get inside those cabins and go for a ride high up in the sky. It's a thrilling experience!

So, my dear little adventurer, get ready to have a fantastic time exploring gears, and circuits, and creating our wooden mechanical Ferris wheel. Let's learn, play, and have an amazing adventure together!

# Let's see what we need and how to prepare:

#### How to get prepare:

- Before you start, you need to find a safe and clean place to work.
- If you have any questions or need help, you can ask your parents, a grownup or teacher and they will assist you.

#### Have fun!

#### Some things to keep in mind:

- Be careful: When you open the package with the parts, be careful not to drop or lose any small parts. They are very important for your model. If you lose a piece, your model might not work!
- Read and follow: If you want to make your model easily, you need to read the instructions well and follow the steps.

#### Remember to get your own 2 x AA batteries for Mansion Manor!

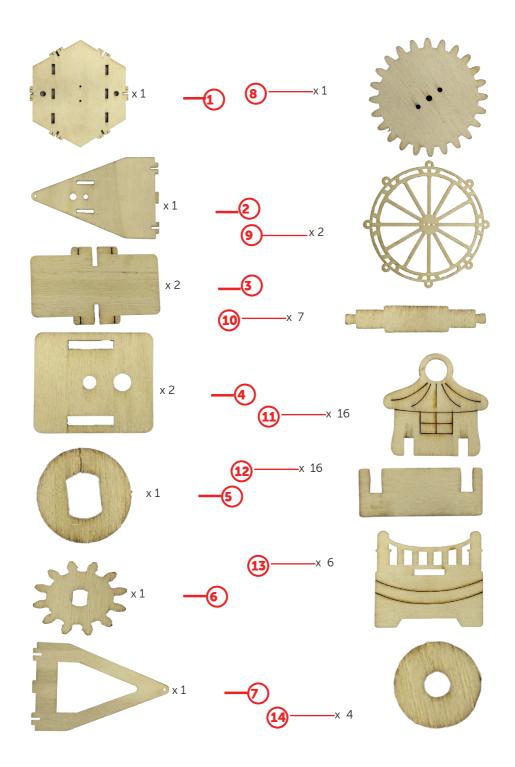

## What is in the BOX

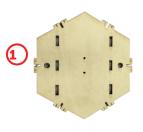

- 14 Pieces of board
- 1 yellow gear
- 1 battery box
- 1 shaft
- 2 orange fixing rings.
- 3 4mm screws
- 22 7mm screws

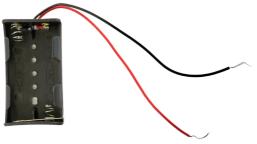

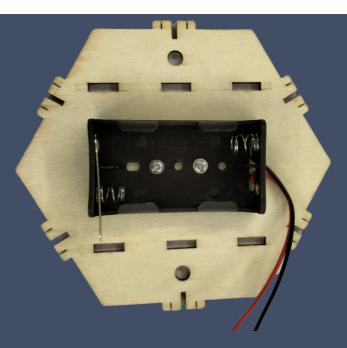

Using two 4mm screws, attach the battery box to board 1. Look at the picture to know where it goes. Then, pass the two wires of the battery box through the round holes on board 1.

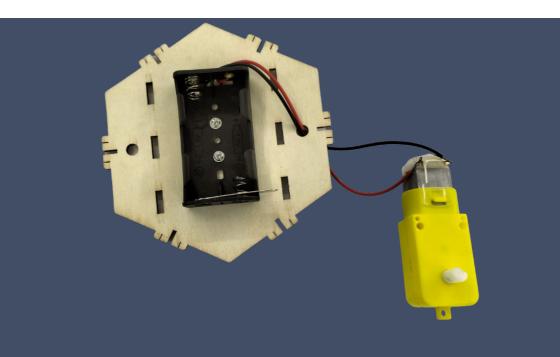

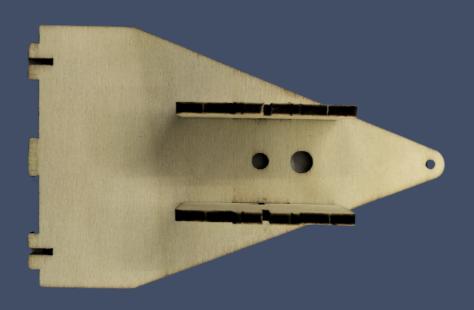

Take the two wire ends from the battery box and connect them tightly to the copper holes on the motor (the black wire goes on the left side, and the red wire goes on the right side).

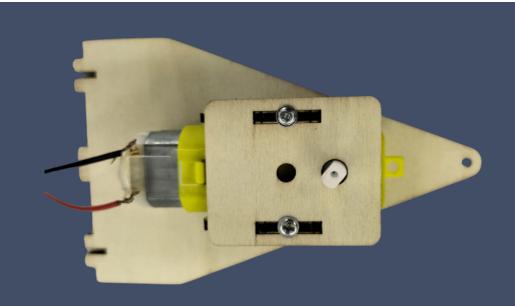

Put the two number 3 boards on top of board 2 and use two 7mm screws to attach them at the bottom.

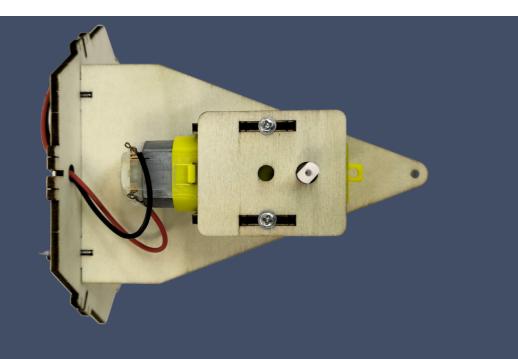

Line up the motor's rotating shaft with the big round hole on board 2 and install it there. Next, attach board 4 on top of the two number 3 boards and tighten the two 7mm screws.

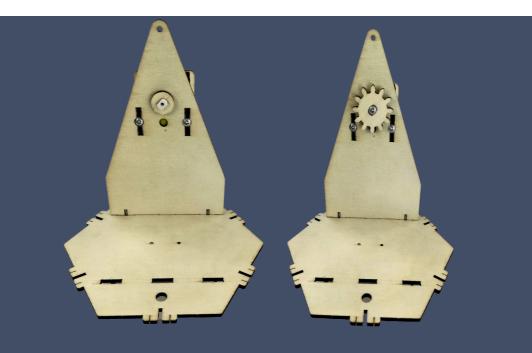

Using the picture as a guide, install board 2 onto board 1 and secure it with two 7mm screws at the bottom (make sure the motor is facing outward).

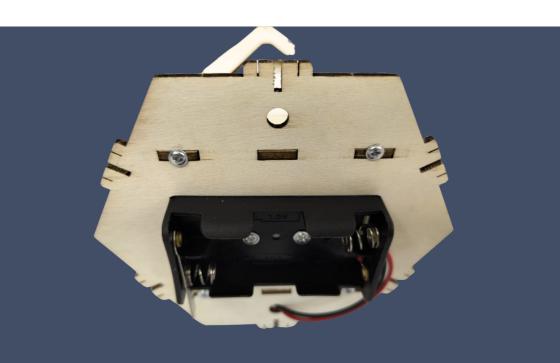

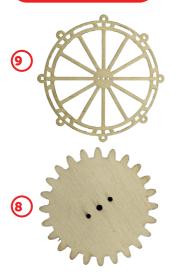

One by one, put boards 5 and 6 onto the white shaft of the motor. Finally, use a 7mm screw to tighten them in place.

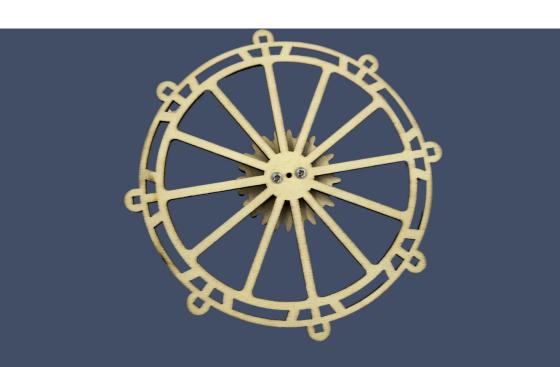

Following the picture, install board 7 onto board 1 and secure it with two 7mm screws at the bottom.

As shown in the picture, use two 7mm screws to attach board 8 to board 9.

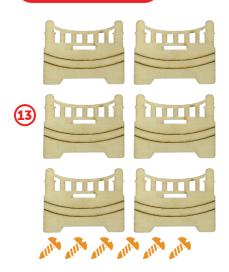

Place two number 11 boards on both sides of board 10. Then, put two number 12 boards as shown in the picture. Press them against the desk to make sure they are installed properly.

Repeat step 9 seven more times to install a total of eight sets of components.

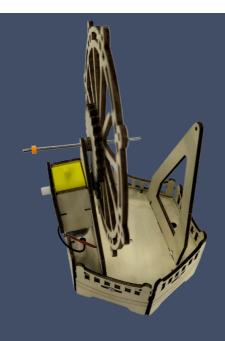

Install six number 13 boards onto board 1 using six 7mm screws.

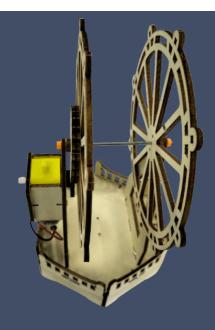

Attach one end of the long shaft to a small rod, then pass the other end of the iron shaft through boards 2 and 14.

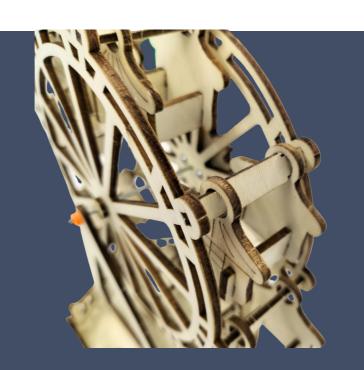

Put the iron shaft from step 13 through the components from step 9 and another number 9 board (make sure the big gear is facing outward). Attach one end of the long iron shaft to a small rod, then pass the other end of the iron shaft through boards 2 and 14.

Install one set of components from step 10 onto each of the two number 9 boards, following the positions in the picture.

Using the same method as step 16, install the remaining seven sets of components from step 11 onto the two number 9 boards.

After completing all the steps, insert the batteries and turn on the power for the Ferris wheel. If it spins smoothly, it means the finished product is working perfectly!

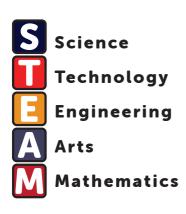

# Now you have your very own mechanical ferris wheel!

Finally, it's alive! Now we will become the best of friends!

Let's explore the trilling ride together.

# If Mansion manor doesn't want to work!?

- Check whether the wiring has been connected and whether the battery is installed incorrectly. See step 3 and step 18; 3. Check whether the battery is low on power and try replacing it with a new one.
- Check whether the two gears are meshed.
- (Detection step 10, step 11, step 16 and step 17)

#### Here's how they help:

- Hands-On Learning:
   Kids do experiments and projects, making learning fun.
- Problem-solving:
   This makes your child think outside the box to solve a problem.
- Creative Thinking:
   Arts and design are part of **STEAM**, so kids get to be creative, and think of new ideas to build and create.
- Confidence:
   Completing projects makes kids feel like they acomplished something, building confidence in creating more and unique things.
- 5. *Preparation:* **STEAM** skills are important for the future, so kids can use the skills they learn, to create a better future.

**STEAM** kits - help kids learn many skills they'll need in a fun and practical way.

## Collect them all

With a bit of
imagination you can
create your own
unique friends. Please
share your creations
with our community

Please ask you mom / dad / teacher or a grown up to help you to upload your creations to our community page on the website. We would love te see your creations and also share and inspire the little creator in you.
